

## MONITORING OF ENVIRONMENTAL PLAN FOR JN PORT ENVIRONMENTAL MONITORING REPORT- JUNE 2021 EXECUTIVE SUMMARY

### 1.0 Ambient Air Monitoring:

Monthly average values of Air Quality parameters at various stations in JNPT area during June, 2021.

Parameters			Industrial (Port Operation) Area						Residential Area	Eco Sensitive area

### **Conclusion:**

- 24-hr average concentration of PM<sub>10</sub>, PM<sub>2.5</sub>, SO<sub>2</sub>, NO<sub>2</sub>, NH<sub>3</sub> other parameters were measured at nine locations viz. POC, IMC, NG, SEZ, APM, BMCT, CB, JNP residential township and EC area using high volume samplers, respirable sampler (APM 460 NL and APM 550 MFC) and gaseous sampler.
- During June, 2021 overall ambient air quality of the JN Port area is within CPCB permissible limits. To maintain the overall Air Quality, the port is using number of precautionary measures, such as maintained a wide expanse of Green zone, initiated Inter-Terminal Transfer (ITT) of tractor-trailers port, switched from diesel to electrically powered e-RTGCs which not just help saving cost but are friendly to environment, installed solar panels on the roof tops of various building in the office premises which cumulatively reduces electricity consumption, the use of LED lights at JNP area helps in lower energy consumption and decreases the carbon foot prints in the environment, time to time cleaning of paved and unpaved roads, use of tarpaulin sheets to cover dumpers at project sites etc. for cleaner and greener future.
- JN Port received 778 mm rainfall during the month of June 2021. This is due to Monsoon effect, which triggered good rain. The prominent wind direction (blowing from) was the West South West (WSW) in the port area. Average values of wind speed, temperature, relative humidity and solar radiation recorded were 5.36 Km/Hr, 32.27°C, 89.96% and 92.66 W/m<sup>2</sup> respectively.

### **Corrective Action Suggested:**

- During a thunderstorm, avoid standing under trees and electricity poles.
- Perform periodic maintenance for electrical and water systems.
- Be aware of the changes that could occur to the roads as a result of the changing weather conditions.
- Display of Environmental Initiative Boards should be increased as like JNPT township, to create awareness towards public.
- Practice should be initiated for using mask as preventative measure, to avoid inhalation of dust particle.
- Avoid excessive idling of automobiles and ships.
- Proper disposal of solid waste in solid waste management plant to maintain clean environment.
- Use of renewable energy like solar energy should be optimal and ensure to work continuously.
- To avoid airborne disease Port workers must maintain a safe distance from anyone

- who is coughing or sneezing.
- New Services and technology like Electric cart, Inter-Terminal Transfer (ITT) are worthy selection to reduce Port operation efficiency and fuel cost.
  - Conventional RTGCs should be altered as E-RTGCs counting inside the port completely.
  - Stay sanitized of public transport and all basic items at public interaction places as much as possible.
  - New scanning technology and new high power Tugs are reducing operation timing and CO2 Emission are good creativity.

## 2.0 Marine Water Quality

Observed concentration ranges of Marine Water for various parameters for JNP area during tidal cycle (*For June, 2021*).

Sr.	Parameter	Observed	Unit	Prescribed Limits
1	Temperature	°C	26.8-32.2	-
2	pH	-	7.34-8.01	6.5 - 9.0
3	Salinity	ppt	23.6-30.8	-
4	Turbidity	NTU	22-75	-
5	TDS	mg/L	22369-37845	-
6	TSS	mg/L	169-354	-
7	TS	mg/L	22614-38148	-
8	DO	mg/L	5.01-6.24	3.0 mg/L(min.) or 40% of saturation value
9	COD	mg/L	49.3-105.2	-
10	BOD	mg/L	1-2.28	5 (max.)
11	NH <sub>3</sub> -N	mg/L	0.0039-0.0230	-
12	Phenol	mg/L	0.00574-0.01066	-
13	Oil & Grease	mg/L	0.099-0.362	10 (max.)
14	Total Plate Count	CFU/ml	76-103	-
15	Fecal Coliforms	MPN/100ml	68-95	500 (max.)

### **Conclusion:**

From the above results it can be concluded that, the Port's working does not affect the Quality of the Marine water. The overall Marine Water Quality of the Harbour is in good category.

### 3.0 Marine Ecology (Flora and Fauna):

Sr. No.	Parameter	Observed Range	Criteria
1	Net Primary Productivity	4.62-13.00 mg C/m <sup>3</sup> /day	<1500 mg C/m <sup>3</sup> /day at surface
2	Chlorophyll a	0.1802-0.2450 mg/m <sup>3</sup>	<4 mg/m <sup>3</sup> (Oligotrophic class), 4-10 mg/m <sup>3</sup> (Mesotrophic class), >10 mg/m <sup>3</sup> (Eutrophic class)
3	Phosphate	34.19-135.90 µg/L	0.1-90 µg/L
4	Nitrate	92.75-180.16 µg/L	1.0-500 µg/L
5	Nitrite	78.65-123.03 µg/L	<125 µg/L
6	Particulate Organic Carbon	4.352-8.747 mg/m <sup>3</sup>	10-100 mg/m <sup>3</sup>
7	Silicate	30.19-70.62 µg/L	10-5000 µg/L

The results obtained from the study for the month of June, 2021. Nitrates, Nitrite and Silicate are well within prescribing standards for ecological parameters for Arabian Sea except Phosphate. Net Primary Productivity and Chlorophyll-a were well within prescribed standards for ecological parameters for Arabian Sea. However, considering the activities in JNP Harbour, it is seen that the marine ecosystem is not adversely affected by Port activities.

#### **Corrective Action Suggested:**

Proper care should be taken for treatment of sewage and industrial waste before discharging into the open sea by nearby cities, industrial estates and villages etc.

#### **4.0 Drinking Water Quality**

The drinking water being supplied to JN Port is safe for drinking purpose. At all drinking water monitoring stations around port area are found to be as per the drinking water specifications given in IS 10500:2012 and also on the basis of analysis parameter.

#### **5.0 Monitoring of Performance of Sewage Treatment Plant**

It is seen that the performance of STP at JNP Township is satisfactory. The treatment plant was well maintained during [June 2021] with considerable removal efficiency achieving the standards prescribed for final disposal.
